Attn: Terry Ritz

**Re: Andrew Court
Stormwater System Certification**

Dear Mr. Ritz:

In accordance with Condition 9.P of Certificate No. 260-CF of the Town of Bethlehem, for Conditional Approval of the Final Plat for the above development, Ingalls & Associates, LLP performed a site review and as-built survey to verify that components of the new stormwater system were installed in general conformance with the approved plans and specifications. The reference documents include a plan set prepared by this office, titled "The Grove, Andrew Court, Pine Street & Grove Place"; last revised August 25, 2014.

Components of the system which were reviewed to be in conformance included the pond location, general shape, slopes, stormwater piping, inlet and outlet structures and locations thereof. An as-built survey has also been completed and reviewed to confirm observation findings.

The storm pond will require plantings along the aquatic bench in accordance with plan entitled "Construction Details, The Grove" prepared by Ingalls & Associates, LLP dated November 19, 2009 and last revised March 28, 2014. These plantings should be installed during the growing season and inspected prior to the filing of the Notice of Termination for the site.

The owner should also continue routine SWPPP observations to ensure E&SC measures are functioning as planned and SWPPP site logs are being maintained in accordance with NYSDEC Regulations. Once all buildings are complete and all disturbed areas finally stabilized (80% vegetative cover over all areas), a Notice of Termination (NOT) should be submitted to the Town MS4 official.

Please contact this office at 393-7725 if you have any questions.

Respectfully,
Ingalls & Associates, LLP

Christopher Longo, PE
Project Engineer
