SEPTIC TANK DETAILS AND LAYOUT
DELMAR

ALBANY COUNTY
Scales as shown
NEW YORK
JAN. 14, 1955
Revised Feb. 16, 1955

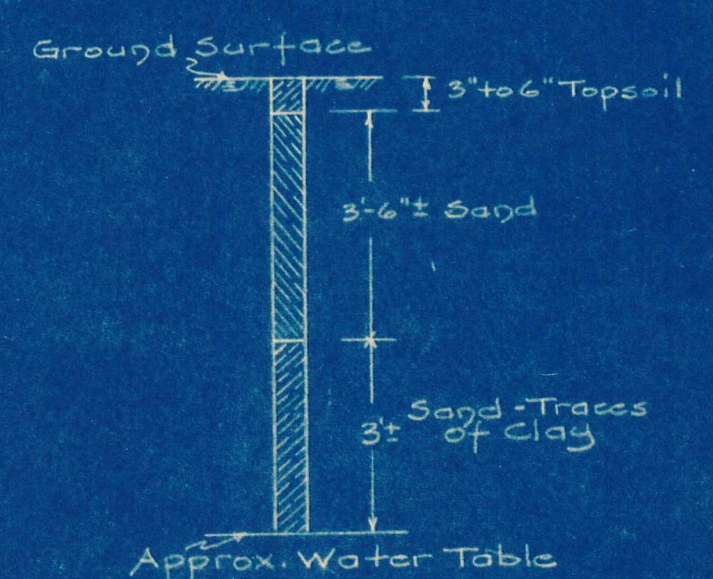

NOTES

Design of Septic Tank is based upon 3 living units.
Liquid capacity of Septic Tank shall be at least 200 gals.
A metal tank, Commercial Standard #17751, may be substituted for the concrete tank as shown.
Line from house sewer and line between Septic Tank and Distribution Box shall be bell and spigot type vitrified or concrete pipe with water-tight joints.
Disposal Field shall not be located within 10 feet of dwellings, lot lines or large trees.
Soil tests were taken at present grade. Extensive grading would require new percolation tests.
Grades of all tile lines shall be strictly adhered to. It is suggested that for most efficient operation of Sewage Disposal system any surface drainage be diverted from the disposal area.
Lot numbers to be used as house numbers.
Length of tile field based on 15 minute test.
Elevations refer to U.S.G.S. datum. Bench Mark is top of of nut at point of arrow on hydrant - North side of Rowland Ave. near Albin Road - Elev. 217.31
Elevations shown thus - 202.2 - are existing or proposed finished grades. Other elevations shown are present ground.
Lots marked "Fill" are to be filled with sand between building line and street sufficient to slope down from house to street.
Amount of fill to be at least 2 feet and must be compacted before tile fields are constructed.
See plan for finished grade, filled lot.
Tile lines in disposal field must be at least 2 feet above ground water.
Perforated pipe must be used in filled ground.

TYPICAL LAYOUT
Scale 1"=40'

Approx. Water Table
TYPICAL BORING
(High Ground)
Scale 1"=8'

NOTE: Borings in low areas reveal predominance of clay at 1 foot below surface.
